Overview

HP StorageWorks 1000 Modular Smart Array Modular Smart Array The HP StorageWorks 1000 Modular Smart Array (MSA1000) is a 2 Gb Fibre Channel storage system designed for the entry-level to mid-range Storage Area Network (SAN). Designed to reduce the complexity, expense and risk of SAN deployment, the MSA1000 is a scaleable, high performance storage system built with investment protection in mind. The modular design of the MSA1000 allows the user to easily add storage capacity as needed. With the addition of two HP StorageWorks MSA30 disk enclosures with space for a total of forty-two enterprise-class drives, maximum storage capacity is 12TB. All necessary configuration and management programs are included and there are no unexpected charges for extra licenses as your capacity needs grow or as you attach more servers.

The MSA1000 is a member of the HP StorageWorks Modular Smart Array family, delivering industry-leading technology to meet today's demanding and growing storage needs. These storage solutions offer the best price performance features for direct attach environments, small clusters, and entry-level and mid-range SAN environments. Each solution is designed to maximize transfer rates and reduce management costs, while driving rapid return on investment.

Key Features

The MSA1000 offers the following key features:

- Scaleable from 1 to 42 drives via HP StorageWorks drive enclosures for up to 12TB of storage
- Dual ACTIVE/PASSIVE controllers (optional) can both be configured to provide fail-over protection extending support to Windows, Linux, NetWare, OpenVMS, and Tru64 UNIX.
- HP-UX and SCO are supported in single controller configurations only.
- Optional embedded 8-port 2 Gb Fibre Channel Fabric Switch
- RAID 6 with HP's Advanced Data Guarding technology (RAID ADG) Highest level of fault tolerance, allocates two sets of parity data across drives and allows simultaneous write operations, this level of fault tolerance can withstand two simultaneous drive failures without downtime or data loss.
- 2 Gb/1 Gb Fibre connection to host Supports both 1 Gb and 2 Gb Fibre Channel fabrics to ensure your investment in 1 Gb infrastructure is protected. Also works with the new 4 Gb switches and HBAs at 2Gb speed.
- High performance controller(s) built on DAS to SAN (DtS) architecture.
- Hot plug expansion and replacement support Hot plug expansion and replacement of hard drives and redundant controllers, for simple, fast installation and maintenance. Fans and power supplies are also hot plug replaceable.
 Dependent on individual operating systems.

What's New

 Updating the MSA1000 SAN Starter G2 Kits, to now feature 4 Gb PCI-Express (PCI-E) HBAs. Older Kits feature PCI-X HBAs.

MSA1000 Highlights

High Levels of Performance, Scalability, and Functionality	 Performance – The MSA1000 cs and its components have been designed using the latest in standard 2 Gb interconnects and Fibre Channel technology. Performance is rated at a transmission rate of up to 30,000 IOPs from cache and bandwidth of up to 200 MB per second. Modular Chassis – The modular design of the MSA1000 cabinet supports up to fourteen 1" Universal hard drives, redundant controllers, 2 Gb embedded fabric switches or hubs, fans
	 and power supplies in a 4U rackmount cabinet. Scalability – The MSA1000 is easily expanded. The MSA1000 cabinet scales to 4 TB using fourteen 300 GB, 1" HP Universal hard drives. By simply adding additional StorageWorks disk Enclosures (two enclosures max), the MSA1000 scales to 12 TB using forty-two 300 GB 1" HP Universal hard drives – all within 10U of rack space. MSA SAN Switch 2/8 – The optional MSA SAN Switch 2/8, which can be installed within the MSA1000 cabinet, offers 2 Gb full fabric performance at an attractive price. A second MSA SAN Switch 2/8 can be installed for redundancy. There are seven pluggable ports available (four SFPs are included). The eighth port is directed internally to the controller. MSA Hub 2/3 – Not available for use with OpenVMS or Tru64 UNIX operating systems. The optional MSA Hub 2/3, which can be installed within the MSA 1000, offers 2 Gb performance. With two ports accessible by the user, the MSA Hub 2/3 is the ideal interconnect for low-cost 2-node clustering or simply attaching two servers. A second MSA Hub 2/3 along with a second controller can be installed for redundancy. This hub ships with two SFPs included.
	 Hot Plug Expansion and Replacement Support – The MSA1000 supports hot plug expansion and replacement of hard drives, redundant controllers, fabric switches or hubs for simple, fast installation and maintenance. Fans and power supplies are also hot plug replaceable. RAID 6 with HP's Advanced Data Guarding technology (RAID ADG) – This is the highest level of fault tolerance. It allocates two sets of parity data across drives and allows simultaneous write operations. This level of fault tolerance can withstand two simultaneous drive failures without downtime or data loss.
DtS Architecture (Direct Attach to SAN) Data Migration	DtS (Direct Attach to SAN) architecture is an exclusive MSA1000 feature that provides a quick and easy way to migrate stored data, disks and enclosures protected by most Smart Array controllers to a MSA1000 storage system.
	Data that is currently stored on 1" Universal disk drives using recent HP Smart Array controllers, as well as data on a RA4100 or an MSA500 can easily be migrated to the MSA1000. Simply remove the drives from the older systems and insert them into the MSA1000. All configuration information and data will be preserved allowing migration to be completed in minutes, not hours or days. Refer to the MSA1000 DtS Data Migration White Paper for a list of compatible Smart Array controllers and further details.
Broad Server, Operating System and FC Interconnect Support	The modular and scalable design of the MSA1000 provides an extremely flexible platform. You can buy what you need today and purchase additional capacity and performance as your data storage needs grow, instead of making a large up-front investment. Additional drives, controllers, cache, fabric switches and storage enclosures can easily be added, as your storage needs change.
	 Fabric Support for 1, 2, and 4 Gb Infrastructure – The MSA1000 supports 1, 2, and 4 Gb Fibre Channel fabrics to ensure that your investment in your current or future infrastructure is protected. Optional embedded interconnects – Both the MSA SAN Switch 2/8 and the MSA Hub 2/3 require no rack space as they are installed in the MSA1000's chassis. This not only saves valuable rack space (up to 2U saved) but also eliminates some of the cabling needed with external interconnects. The MSA SAN Switch 2/8 ships with 4 SFPs installed and the MSA Hub 2/3 ships with 2 SFPs. Universal Hard Drive – Since the MSA1000 supports HP Universal 1" Ultra2, Ultra3 and Ultra320 drives, your investment in SCSI technology is protected and cost is minimized as you add new drives. Pre-Failure Warranty – Drives installed in an MSA1000 and monitored under Insight Manager are supported by a Pre-Failure (replacement) Warranty. NOTE: Pre-Failure Warranty allows for the replacement of designated drives in an MSA1000 before they actually fail when using Insight Manger on ProLiant servers. NOTE: Some operating systems may not support all of these features. Multi-platform Intel®, AMD® Opteron, PA-RISC and Alpha based Server Support – The MSA1000 offers Multi-platform server support to allow a broad range of servers to take advantage of the MSA1000's scalability, flexibility and connectivity, and supports ACU and Insight Manager. When used with a ProLiant server, the MSA1000 also provides unparalleled integration with the MSA1000 Support CD and Pre-Failure Warranty support. SCO UnixWare support – SCO OpenServer 6.0.0, SCO UnixWare 7.1.3 with Maintenance Pack 3 and 7.1.4 are supported in limited, single controller 2-node homogeneous configurations.
	 Integrated Configuration and Management Tools – The MSA1000 utilizes a standard,

MSA1000 Highlights

integrated set of management and utility software. These tools consistently lower the cost of ownership by reducing training and technical expertise necessary to install and maintain the MSA1000.

Configuration	- Brovideo o graphical view of HD drive array configurations

system)	or drivers.

Server Compatibility

All ProLiant x86 and x86_64 servers are fully supported unless noted below. **NOTE:** New model testing is ongoing.

ProLiant x86 servers

BL20p G2, BL30p, BL40p, DL140 G2, DL360, DL360 G2, DL360 G3, DL380, DL380 G2, DL380 G3, DL560, DL580, DL580 G2, DL740, DL760, DL760 G2, ML370, ML370 G2, ML370 G3, ML530, ML530 G2, ML570, ML570 G2, ML750

ProLiant AMD Opteron servers

BL25p, BL25p (Dual Core), BL35p, BL35p (Dual Core), BL45p, BL45p (Dual Core), DL145, DL145 G2 (Dual Core), DL385, DL385 (Dual Core), DL585, DL585 G2 (Dual Core) (DL145-G1 not supported in Boot-From-SAN environment)

ProLiant INTEL EM64T servers

BL20p G3, BL20p G4, BL460c, BL480c, DL360 G4p, DL360 G4, DL360 G5, DL380 G4, DL380 G5, DL580 G3, DL580 G4, ML350 G4p, ML350 G5, ML370 G4, ML370 G5, ML570 G3, ML570 G4

Integrity IA64 (Itanium) servers

rx1600, rx1620, rx2600, rx2620, rx4610, rx36xx, rx4640, rx5670, rx66xx, rx7620, rx8620, rx8800, rx9610, zx2000, zx6000, Integrity Superdome

NOTE: BL60P (FC Mezzanine Card, FC passthru or internal McData/Brocade FC 4Gb Switch Cube)

HP-UX specific servers

rp24xx, rp34x0, rp4440, rp54xx, rp740x, rp7410, rp7420, rp8400, rp8420, SD16000, SD32-128A, SD32/64000, C3xxx, B2000, J5xxx, J6000, J7xxx, K-class

Supported Alpha servers

DS10, DS15, DS20, DS20E, DS25, ES40, ES45, ES47 (PCI-X), ES80 (PCI-X), GS60, GS60E, GS80, GS140, GS160, GS320, GS1280 (PCI-X)

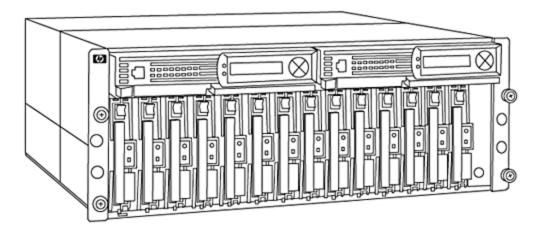

NOTE: Certification of new ProLiant and Integrity server models is ongoing. Not all OSes are supported on all models. Supports most multi-vendor industry standard 32-bit Intel-based (x86) and Opteron servers.

The MSA1000 SMB Kit is not designed to connect to any other StorageWorks SAN or interconnect. See the MSA1000 SMB link at http://www.hp.com/go/msa1000 for additional details	A7450A
	HP StorageWorks MSA1000 Small Business HA Upgrade Kit for Windows and Linux NOTE: Includes (1) redundant controller; (1) Fibre Channel I/O Module (1) 2/8q FC Switch; (2) FC HBA's (PN A7523A); and cables.	A7452A
	It may only be used with the MSA1000 SMB Kit (A7450A)	
	2 Gb, 32-Bit/133 MHz PCI-X-to-Fibre Channel Host Bus Adapters NOTE: This is a single channel HBA for Windows 2000, Windows 2003, and Linux. It may only be used with the MSA1000 SMB Kit (A7450A)	A7523A

MSA1000 Components

HP StorageWorks Modular Smart Array 1000	The 4U cabinet houses up to fourteen 1" Universal hot pluggable Ultra2, Ultra3, and/or Ultra320 drives. Each MSA1000 includes the following standard components: (1) MSA1000 Controller, (1) MSA Fibre Channel I/O Module with a single SFP, dual hot pluggable fans/power supplies and power cables, documentation and a support software CD. The modular design of the MSA1000 makes it possible to add redundant controllers, redundant single port Fibre Channel I/O Modules, 3-port hub, or embedded fabric switch and storage expansion enclosures. Additional storage enclosures may be added without power cycling the MSA1000.			
MSA1000 Controller	The MSA1000 Controller is an integrated RAID controller with an LCD/LED status display and 256 MB read/write battery-backed cache (expandable to 512 MB per controller). One MSA1000 Controller is included with the MSA1000; a redundant MSA1000 Controller is an option. Purchase of Secure Path software or use of various industry standard MPIO solutions is a requirement if a			
	second controller is chos Key Features			
	Rey realures	 Redundant controller support with mirrored cache Fabric, Private Loop & Public Loop Support 		
		 Auto Negotiated F, FL & L Port Login 		
		• RAID 0, 1, 1+0, 5 and ADG		
		2 Gb/1 Gb Frequency Agile		
		 Primary and Secondary Inter-Controller Link (ICL) 		
		 Host based configuration via ACU (OS dependent) Optionally configurable with Command Line Interface (CLI) 		
		 Remote configuration and monitoring via ACU (offline and remote) & Insight Manager (OS dependent) 		
	MSA1000 Controller	 Selective Storage Presentation: allows multiple hosts to access 		
	Management Features	a single MSA1000 storage system. Host access can be defined al the way down to a logical volume level.		
		 Online RAID Level Migration: allows for online post-configuration change to RAID level without destroying data or volume information. 		
		 Online Capacity Expansion: lets you add storage to an operational MSA1000-reducing expensive server downtime. Global Online Spare: reduces the risk of data loss by facilitating automatic rebuilds after a drive failure. 		
	Fault Tolerance	Several fault tolerant configurations which keep data available and servers running while drives are being replaced are supported including:		
		 RAID 6 with Advanced Data Guarding: Allocates the equivalent of two parity drives across multiple drives and allows simultaneous write operations. 		
		• Distributed Data Guarding (RAID 5): Allocates parity data across multiple drives and allows simultaneous write operations.		
		 Drive Mirroring (RAID 1, (1+0 Striped Mirroring)): Allocates half of the drive array to data and the other half to mirrored data, providing two copies of every file. 		
	Fault Recovery	Minimizes downtime, reconstructs data, and facilitates a quick recovery from drive failure:		
		 Online Spares: If a failure occurs, recovery begins with an online spare and data is reconstructed automatically. Multiple online spares can be assigned per array and used across multiple arrays It is also possible to assign different online spares across different arrays. 		
		• Array Accelerator: Onboard, battery-backed cache memory protects data in the event of a power failure. In the unlikely event of a controller failure, the battery-backed cache will save critical user data.		
MSA Fibre Channel I/C Module	-	bre Channel connection per controller from the host side into the e Channel I/O Module includes one 2 Gb, Short Wave, Small-Form-		
		eiver (SFP). A second MSA Fibre Channel I/O Module can be installed for		
	The single I/O module ca	n be used in a direct connect configuration (no switch or hub) in		

MSA1000 Components

MSA SAN Switch 2/8 (embedded)	The optional MSA SAN Switch 2/8 offers low price per port and full scalability, doing so while taking zero rack space, even in a redundant configuration. This second generation integrated switch option offers the customer more ports than our previous offering and is a full member of the HP SAN Switch family, assuring interoperability from the smallest to the largest SAN configuration. The HP StorageWorks MSA SAN Switch 2/8 can be used by the true entry-level customer looking for a very inexpensive switch based on cost per port. This same switch can be attractive to the larger customer who must have the interoperability with their other external B-Series SAN switch products from HP and especially appreciates the rack space saving characteristics. (The MSA SAN Switch 2/8 replaced the obsolete MSA Fabric Switch 6 option.) Key Features • Eight 2 Gb ports: 1 to controller, 7 user accessible • Product ships with 4 SFPs installed • No E-port restriction, accepts all optional software • Interoperates with external HP B-Series SAN Switch 2 and 4 Gb switches • Configuration and management methodology common with SAN Switch product line, same methods as installed base of 40,000+ HP 1 and 2Gb SAN Switches
MSA Hub 2/3 (embedded)	The HP StorageWorks MSA Hub 2/3 is a low-cost interconnect designed for clustering or low cost, high speed attachment of two servers to the MSA1000. The MSA Hub 2/3 is a 3-port Fibre Channel Arbitrated Loop hub that is mounted on a blade that easily installs inside the MSA1000 storage unit, saving valuable rack space. Two of these hubs may be installed for redundancy within the MSA1000. The MSA Hub 2/3 is not cascadable. It is not certified for Alpha environments. The hub presents the user with two SFP ports for simple direct attachment to two single or clustered servers without having to purchase an external interconnect device. It offers the most cost-effective solution for a user to enable a clustered server environment.
	 High Performance: supports MSA1000 with a 2 Gb interconnect capable of up to 200 MB throughput Low Cost: supports the entry-level SAN array with the most cost effective option for 2-node clustering Compact: installs in the MSA1000, replacing the I/O module, saving valuable rack space Complete: comes with two SW SFPs - no need for further investment Not qualified with servers utilizing Tru64 UNIX or OpenVMS operating systems.
2 Gb Small Form Fact pluggable (SFP) SW Transceiver Kit	:or 2 Gb Small-Form-Factor-pluggable (SFP) SW Transceivers are industry standard connection devices, which hot plug into 2 Gb infrastructure components such as 2 Gb Fabric Switches. HP StorageWorks 2 Gb SFP SW Transceivers support distances up to 300 meters at 2 Gb and 500 meters at 1 Gb using multi-mode fiber optic cable.
Multi-Mode Fibre Channel Cables	Multi-Mode Fibre Channel cables provide a thin, flexible cabling solution that is immune to electromagnetic interference. HP offers cables to connect the MSA1000 to both 2 Gb and 1 Gb Fibre Channel infrastructures. LC to LC cables are used when connecting the MSA1000 to other 2 Gb Fibre Channel components because both connections will utilize small form factor transceivers. LC to SC cables are used when connecting the MSA1000 to 1 Gb Fibre Channel components. 1 Gb components use the larger GBIC style transceivers.

Optional Software

HP StorageWorks Secure Path	HP StorageWorks Secure Path is a family of high availability multi-pathing software products providing continuous data access from the HP RAID Array to host servers running the Windows Server 2003, Windows 2000, Windows NT, Linux and NetWare operating systems. Redundant hardware, advanced RAID technology and Secure Path's automated failover capability are used to enhance fault tolerance and availability. Secure Path effectively eliminates controllers, disk drives, interconnect hardware and host bus adapters as single points of failure in the storage subsystem. The attachment of non-Secure Path (single HBA) servers to an MSA1000 with dual controllers that has servers with Secure Path (dual HBA) attached is supported where the operating systems are Windows or NetWare. Users must realize that in event of a controller fail-over (failure of active controller) the single path servers will lose access to their data on the MSA1000. NEW – Secure Path for Linux is used on any node or cluster in Windows Server 2003. NOTE: If Secure Path installed, regardless of operating systems. NOTE: refer to http://www.hp.com/go/securepath for the latest Secure Path parameters.			
		Monitors I/O paths and alerts on significant events		
	Used in	Stand alone Configurations		
		Cluster configurations SAN configurations		
	 HP supports additional high availability multi-pathing capabilities within various operating systems and through third-party vendors, providing continuous data access from HP's RAID MSA1000 to host servers. Options are available for servers running the Windows and Linux operating systems. More information and the explanation of restrictions are available at http://h18006.www1.hp.com/products/sanworks/multipathoptions/index.html Microsoft Windows 2000 and 2003 (32 bit EE and 64 bit EE only)can utilize the HP MPIO 			
	 Linux industry 	v1.3 for MSA Arrays, a DSM available for free download at the above site. standard failover for the MSA1000 is available at no charge within the HBA om QLogic or Emulex.		
MSA1000 clustering	the old cluster restrict been overcome. While flexibility both in num dissimilar operating s For example you may other individual serve	gaining in popularity as users desire a high level of data availability. Many of tions that were the product of both hardware and operating systems have le there still remain configuration limits, the result is a new high degree of ober of clusters, mixing clusters with single nodes, and the integration of systems. y mix three Microsoft (Windows Server 2003 or Windows 2000) clusters and rs, even doing so in a heterogeneous server operating system environment. 3 allows a single cluster of up to eight nodes.		
	Single-path (single co up to a 12-node clust limited to six nodes. I with no limitation inhe controller, non-Secur tested and is support	ontroller, non-Secure Path) NetWare clustering has been successfully tested ter. NetWare clusters employing Secure Path (dual controller, dual HBAs) are Multiple NetWare clusters (and single servers) may have concurrent access erent to the MSA1000. Likewise up to a 16-node Linux cluster (single te Path) utilizing SteelEye LifeKeeper for Linux clustering software has been ted. Presently a Linux/Secure Path configuration is limited to a two-node //www.hp.com/go/securepath for any restriction on Linux with Secure Path.		
	generally no more that had an average of fiv different operating sy paragraphs. Performa	he ability to be configured with thirty-two LUNs. Best practices would dictate an sixteen servers accessing a single MSA1000. More commonly, users have be to eight nodes. This can be any combination of hosts or clusters with restems while holding fast to the guidelines and limits described in the above ance within these guidelines is heavily dependent on the actual number of of applications being employed.		

 ProLiant Cluster F200 for the Entry Level SAN (Microsoft) The ProLiant Cluster F200 for the Entry Level SAN is designed to assist configuration of cluster solutions that provide high levels of data and ap in the Microsoft Windows Operating System environment through cluster single-point-of-failure. The ProLiant Cluster F200 for the Entry Level SA node cluster based on Microsoft Windows 2000 Advanced Server and t cluster based on Microsoft Windows Server 2003 Enterprise Edition op StorageWorks Modular Smart Array 1000 (MSA1000) and MSA1500 cc RA4100 and ProLiant Servers. This solution also supports StorageWork management software. 		oplications availability ering to provide no- AN supports a two- two to eight-nodes berating system, the es, or Raid Array

HP Serviceguard for Linux	HP Serviceguard is a high availability solution that leverages the strength of HP's HA business, bringing the best-in-class mission critical technologies to the Linux ProLiant and Integrity servers. HP Serviceguard provides critical applications the that enterprise customers require for 24x7 business operations. It is designed to applications from a wide variety of software and hardware failures, monitoring the server (node) and quickly responding to failures including system processes, sy media and adapters, and application processes. Serviceguard enables custome ProLiant and Integrity server families with shared storage from HP Modular Sma StorageWorks XP disk arrays in a 2-node SCSI or 2 to 16-node Fibre Channel co Please refer to the HP ProLiant High Availability web site under Linux clustering latest information on Serviceguard for Linux: http://www.hp.com/servers/proliant/highavailability/serviceguard	k environment and high availability protect health of each stem memory, LA rs to cluster HP rt Array 500 to HP onfiguration.	
	For general Serviceguard information (HP-UX and Linux), please refer to:		
	http://www.hp.com/go/serviceguard		
	HP Serviceguard for Linux ProLiant Cluster, A.11.16 (2 license version)	305199-B26	
	HP Serviceguard for Linux, A.11.16 (single license version)	307754-B26	
	HP Serviceguard for Linux ProLiant Cluster (per 2-node cluster) A.11.15 HP Serviceguard for Linux (per 32-bit server) A.11.15	305199-B24 307754-B24	
HP ProLiant Clusters for NetWare	 HP supports a broad range of solutions for NetWare Cluster services including configurations featuring the MSA1000 and optionally with HP StorageWorks Secure Path. These solutions provide high availability and maximum resource utilization for NetWare environments from small file sharing implementations to enterprise business computing. Single-path (single controller, non Secure Path) NetWare clusters of up to 12-nodes have been successfully tested. Presently 2-not NetWare clusters with Secure Path have been tested and approved with larger NetWare cluster testing planned. Multiple NetWare clusters are allowed. NOTE: Refer to http://www.hp.com/go/securepath for the latest Secure Path for NetWare parameters. 		
HP ProLiant Parallel Database Clusters for Oracle on MSA1000	The HP Parallel Database Clusters (PDC) for Windows and Linux provide the industry's leading platform for deployment of Oracle 9i Real Application Clusters. The PDC is a multi-node (up to six in Microsoft environments and up to four with Linux)) shared-storage clustering environment that enables industry standard Windows and Linux platforms to deliver performance previously limited to very large SMP (16 to 32 processor) environments. Every server node in the cluster has concurrent read-write access to the common shared database residing on the MSA1000 storage SAN. The multi-node architecture is inherently highly available, loss of any single node results in some degradation of performance but the database remains active and accessible. When optimally integrated with Oracle load balancing and transparent application reconnect features, clients are completely insulated from the loss of a server resource or an Oracle instance failure on a node. To complement the high availability of the server cluster in a Windows environment, the Parallel Database Cluster integrates HP StorageWorks Secure Path for fully redundant access to the database in the even of any failure in SAN connectivity. Secure Path for Linux will be available at a later date. Combined, the Oracle clustering technology and HP platform technology deliver cost effective and highly available enterprise solutions for database applications.		
	For more specific information concerning configuration, interconnect options, and software refer to the HP/Oracle site at http://h18000.www1.hp.com/solutions/enterprise/highavailability/oracle/index.htm		

Optional Software

virtual replicator (Microsoft environments)

HP OpenView storage Storage Virtual Replicator combines a rich set of innovative capabilities that enhances and simplifies storage management for Windows Server 2003 and Windows 2000 environments. Through virtualization, online volume growth, snapshot and management features, the software complements the capabilities within the operating system. HP OpenView Storage Virtual Replicator enables simplification of storage configuration, management, scalability and enhanced availability with e-mail notification for event customization, enhanced pool deletion that enables deletion of pool or disk containing snapshots, enhanced policy descriptions for easier identification. Support for Windows 2000 and Windows Server 2003 **Key Features**

- Virtualization multiple storage arrays can be consolidated into a pool of disk space for individual or clustered systems to use. Multiple virtual disks, up to 2 terabyte in size, can be created from a pool for users and their applications. Existing storage units with production data can be imported into a pool. The data partition is preserved as a virtual disk and unused capacity is added to the pool.
- Online volume growth Enables easy, non-disruptive growth for Windows 2000 or and Windows Server 2003 with zero downtime. Allows a system administrator to grow an existing volume on virtual disks and Windows 2000 basic disk. The system will remain online, and the data on the volume will remain intact.
- Snapshots Instant, point-in-time snapshots for backup, online restore, testing or data mining. Enable instant creation of multipurpose virtual replicas of production data without the requirement of a physical copy Snapshots identical to ordinary physical disks, with both read and write capability. Snapshots can remain online for restore operations, testing, and data mining. Full interoperability with the Windows Server 2003 Volume Shadowcopy Service (VSS).
- E-mail notification customization of events for servers under your span of control.
- Enhanced pool deletion delete a pool that contains snapshots and virtual disks or delete a virtual disk that contains snapshots with the DELTREE command.
- Interoperability with StorageWorks Storage Mirroring
- Enhanced policy descriptions the policy key descriptions have been updated for easier identification.

Please refer to the Optional Software section of this document or visit http://www.hp.com/go/msa1000 for additional details.

Optional Software

HP StorageWorks Storage Mirroring OpenView Storage Mirroring is designed to take small-medium enterprises beyond periodic backup to provide continuous data protection with minimal data loss and immediate recovery from any disaster or system outage. Utilizing patented STAR technology, OV Storage Mirroring captures byte-level changes as they happen and replicates those changes to one or more target servers at any location in the exact sequence sent by the source. Advanced features put you in control of bandwidth usage, queue data changes for replication during off-peak hours, enable e-mail, pager or wireless notification when changes occur and scales organically to meet the need of your environment. OV Storage Mirroring is the core component to the following solutions: disaster recovery, remote availability, centralized backup, serverless backup, data distribution, mining and server/storage migration.

- Supports Microsoft Windows 2000/NT/2003servers
- One-to-one failover/fail back solution for MS-Exchange, MS-SQL and Oracle providing automatic failover and near instantaneous access to replicated data or use replicated data or rebuild your local server.
- Server Groups enables the "grouping" of servers on the management console (GUI) allowing focus on only those servers under your span of control
- Continuous, asynchronous byte-level replication with intelligent data compression captures changes as they occur, ensures sequence of data mirrored on target, and provides user-configurable compression levels to ensure efficient usage of network resources.
- One-to-many and many-to-one host configurations allowing multiple production servers to use the same target server

Configure to Order Program Information

HP introduces the new Configure to Order program on a limited basis. It is not yet available in all areas. The MSA1000 and its options may or may not be factory installed in a rack with add-on controllers, switches, hubs, MSA30 enclosures and hard drives. The MSA1000 may be integrated with 64-bit Integrity and PA-RISC servers or ProLiant or as standalone storage.

Service and Support, HP Care Pack, and Warranty Information

	 Three-year Limited Warranty for MSA1000, Fibre Channel Cables and SFP Transceivers 3 years parts exchange 1 year labor 1 year on-site Next business day response 			
	Options for the MSA1000 carry their own warranty. Refer to HP's Limited Warranty Statement for further details. In countries where available, your HP Limited Warranty includes Customer Self Repair warranty services. Please refer to HP's Limited Warranty Statement for further details:			
	http://h18006.www1.hp.com/products/storageworks/warranty.html			
	Products included in various Kits carry their own individual warranties.			
Warranty Upgrade Options	 Response – Upgrade on-site response from next business day to same day 4 hours Coverage – Extend hours of coverage from 9 hours x 5 days to 24 hours x 7 days Duration – Select duration of coverage for a period of 1, 3, or 5 years 			
Storage Service Packages	 HP Care Pack is defined as an upgrade to the product warranty attribute, available for a specific duration and hours of coverage. HP Care Pack is not available for less than the product's warranty duration. HP Care Pack is available for sale anytime during the warranty period for most products, but the commencement date will be the same as the Warranty Start Date (delivery date to end user customer). Proof of purchase may be required. HP Care Pack services are prepaid. 			
	For additional information on Product Services and HP Care Pack, as well as orderable part numbers, please refer to the URL: http://www.hp.com/hps/carepack/. If you have specific questions about availability or how to obtain services contact your local HP representative. Contact information for your local area can be found at: http://www.hp.com/services.			
Software Product Services	Software product services Product support provides the customer access to HP's experienced technical support resources, as well as access to HP's Information Services database for support on a variety of			
	multi-vendor/multiplatform software products. Product support includes escalation and problem coordination with the appropriate engineering group. HP Services offer a variety of options to allow you to tailor your product service to meet the needs of your organization. Basic warranty on products can be uplifted from day one to ensure you receive the service you need when you need it.

Array Installation and Startup Services	The HP Installation and startup for HP StorageWorks Disk Arrays service package provides installation and configuration of HP StorageWorks Disk Array products. Service highlights include:
	Installation and Startup provides, installation, LUN Disk Design and configuration of the MSA 1000 which includes
	Service Planning
	Service Deployment
	 Installation Verification Testing (IVT) required for this service
	Customer Orientation session
	Service Deployment includes the deployment of the MSA disc array into a new or pre-existing SAN which may consist of switch, hub or SCSI bridge technology. Installation includes the
	customization of up to four host servers, eight host bus adapters (hba's) and up to four high availability software licenses.

NOTE: Refer to Step 7 in the Configuration Information section below for all Service, Warranty Plans, Installation and Startup Services available for the MSA1000

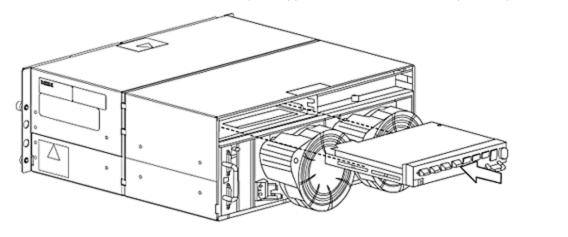

Step 1 – Order Required Items

Step 2 – Choose Optional Non-Redundant MSA1000 System Options

MSA SAN Switch 2/8 (integrated) (Includes four SFPs) MSA Hub 2/3 (integrated) (Includes two SFPs) **NOTE:** The MSA SAN Switch 2/8 has a total of eight Fibre Channel ports. There are seven ports accessible by the user and the eighth is internal to the controller. Four SFPs are shipped installed in the Switch.

The MSA Hub 2/3 has two external Fibre Channel ports, both of which already have transceivers installed. (Not supported with Tru64 UNIX or OpenVMS).

288247-B21

286763-B21

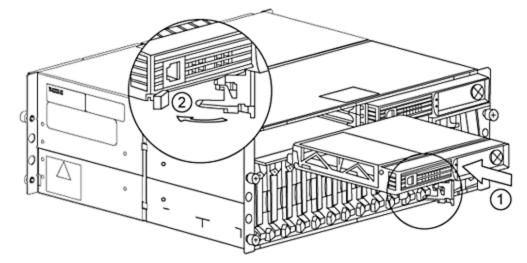

Step 3 – Choose Redundant MSA1000 System Options

MSA1000 Controller

256 MB Cache Modules for Controller (one additional for each controller) HP StorageWorks Secure Path (appropriate model for the operating system) or choose an industry standard failover solution where available

NOTE: Redundant configurations require two Host Adapters per server, an additional controller and an I/O module, an MSA SAN Switch 2/8 or an MSA Hub 2/3 (for Windows or NetWare), and Secure Path or industry standard fail-over software for each server. An industry standard fail-over solution such as Microsoft's MPIO for Windows or the QLogic solution for Linux may be employed in place of Secure Path. For Microsoft ProLiant Clusters, Secure Path software can be substituted with the ProLiant Clusters HA/F200 kit.

Mixing of the MSA Fibre Channel I/O Modular and the MSA SAN Switch 2/8 or the MSA Hub 2/3 is not supported. When configuring the MSA1000 for redundant controllers use either two MSA Fibre Channel I/O Modules, two MSA Hub 2/3s, or two MSA SAN Switch 2/8s.

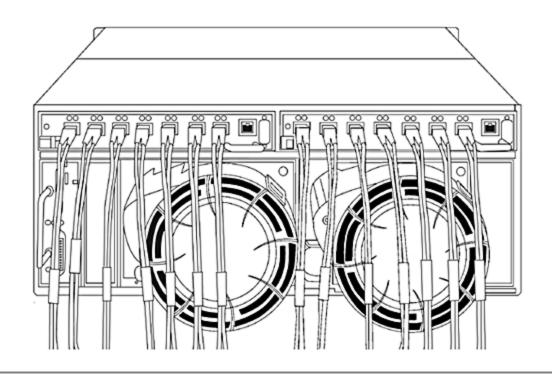

Choose an interfaceMSA Fibre Channel I/O Module (Includes one 2 Gb SFP transceiver)matching your originalMSA SAN Switch 2/8 (integrated) (Includes four 2 Gb SFP transceivers)MSA Hub 2/3 (integrated) (Includes two 2 Gb SFP transceivers)

218960-B21 288247-B21 286763-B21

218231-B22

254786-B21

Step 4 – Choose Supported Options For 2 Gb or 1 Gb Infrastructure

2 Gb Fibre Channel 2 Gb SFP SW Transceiver Kit Transceiver (SFP) A6515A

Technical Specifications

Modular SAN Array 1000 Controller	User Interface	Controller Display with Status Indicators (2) and Push Buttons (4) Status Indicators on front of Controller (16)				
(218231-B22)	Electrical Interface	LVD (Low Voltage Differential) Wide Ultra3 SCSI				
	Protocol Support					
	SCSI Ports	4-channel: 2 external/2 Internal				
	Drives Supported	Up to 42 drives				
	Maximum Capacity	12TB (42 drives x 300GB)				
	Logical Drives	Up to 32 logical drives				
	RAID Support	RAID ADG (Advanced Data Guarding)				
		RAID 5 (Distributed Data Guarding)				
		RAID 1+0 (Striping & Mirroring)				
		RAID 0 (Striping)				
	Cache Memory	Up to 512 MB Read/Write (256 MB modules). If redundant controllers are used they must have equally configured cache				
		ECC protection, battery-backed, and removable				
		Standard as of November 19, 2002: 256 MB cache memory (single module)				
	Cache Batteries	Enables transportable cache; removable for easy replacement				
	Upgradeable Firmware	e 2 MB flashable ROM				
	Disk Drive and Enclosure Protocol Support	HP Ultra 320, Ultra3, and Ultra2 SCSI 1-inch Universal drives				
	Packaging	Dimensions (L x W x D) 17 x 12.5 x 7.75 in (43.2 x 31.75 x 19.7 cm)				
	ruonuging	Weight (Gross) 6 lb (2.72 kg)				
Modular SAN Array Fibre Channel I/O	Connector Type	LC				
Module	Number of Fibre Channel Ports	One 2 Gb Fibre Channel Port using removable Small-Form-Factor-				
(218960-B21)	Bandwidth	Pluggable Transceiver (SFP) 200 MB/s				
	Operation Modes					
	Protocols Supported	Fibre Channel Class 2 and 3 connectionless service Fibre Channel				
	Packaging	Dimensions (L x W x D) 17 x 12.5 x 7.75 in (43.2 x 31.75 x 19.7 cm)				
	l dokuging	Weight (Gross) 6 lb (2.72 kg)				
MSA SAN Switch 2/8 (288247-B21)	Performance	2.125 Gbit/sec line speed, full duplex ;1.063 Gbit/sec line speed, full duplex; Auto-sensing of 1 Gbit/sec and 2 Gbit/sec port speeds; optionally programmable to fixed port speed; Speed matching between 1 Gbit/sec and 2 Gbit/sec ports Aggregate bandwidth 64 Gbit/sec end to end Fabric latency <2.1 µsec with no contention, cut-through routing at 2 Gbit/sec				
	Interoperability	All HP StorageWorks B-series switches				
	Switch bandwidth	32 Gbit/sec end to end				
	Maximum frame size	2112-byte payload				
	Port types	8 ports universal (one internal, seven external), FL_Port, F_Port, and E_Port; self-discovery based on switch type (U_Port)				
	Media types	Small form-factor pluggable (SFP) four included standard; short wavelength (SWL) up to .31 mi (500m), long wavelength (LWL) up to 21 mi (35 km); distance depends on fiber-optic cable and port speed				
	Classes of service	Class 2, Class 3, Class F (inter-switch frames)				
	Management access	10/100 Ethernet port (RJ-45); Serial port (RS-232)				
	Management	Advanced Web Tools included; Fabric Manager (optional) Management access In-band via Management Server.				
	Security	Fabric security for configuration management, SAN access, and authentication/authorization				
	Supported software	Telnet, SNMP, WEBTOOLS, Zoning, Fabric Watch, Extended Fabrics, Remote Switch, Trunking, Advanced Performance Monitoring				
	Fabric services	Simple Name Server, Registered State Change Notification (RSN), Alias Server (multicast); and Zoning, WEB TOOLS. Optional QuickLoop, Fabric Watch, Extended Fabrics, and Remote Switch, Trunking, Advanced Performance Monitoring				
	Diagnostics	Diagnostics POST and embedded online/offline diagnostics				
	Dimensions (h x w x d)	SAN Switch 2/8: 7.75 x 12.5 x 17 in (19.68 x 31.75 x 43.18 cm)
